

EAGLE MARITIME OS

Compliance Operation System

User Guide — Version 1.0

Secure maritime fleet management
For end users and organization administrators

© Elhamy Sobhy 2025–2026

Contents

1. Getting Started

Eagle Maritime OS is a secure, multi-tenant compliance platform that helps ship owners, managers, and crews stay audit-ready across vessels, certificates, incidents, and regulatory frameworks.

1.1 Signing In

1. Open your organization's Eagle Maritime OS URL in a modern browser (Chrome, Edge, Safari, or Firefox).
2. Enter your registered email and password. First-time users receive an invitation email with a temporary link.
3. Optional: sign in with Google if your administrator enabled it.
4. On first login, you will be prompted to set a strong password and confirm your organization membership.

Tip

If you lose access, use "Forgot password" on the sign-in screen. Reset links expire after 60 minutes for security.

1.2 Interface Overview

After signing in you land on the Fleet Dashboard. The main areas are:

- Top bar — organization switcher, notifications, and your profile menu.
- Left sidebar — navigation for Fleet, Vessels, Audits, Incidents, Crew, Compliance, Reports, and Settings.
- Workspace — the active screen; most tables support search, filters, and CSV export.
- Right panel — contextual details when you select a vessel, audit, or finding.

1.3 Your First 5 Minutes

5. Confirm your organization name in the top bar.
6. Open Fleet → verify the vessels list matches your fleet.
7. Open Compliance → review the Fleet Compliance Index.
8. Open Notifications → acknowledge any pending items.
9. Open Profile → set your timezone and preferred language.

2. End User Guide

This section is written for crew members, superintendents, and shore-based operations staff who work with the platform day-to-day.

2.1 Working with Vessels

Viewing a vessel

- Go to Fleet and click any vessel to open its detail page.
- Tabs include: Overview, Certificates, Maintenance, Audits, Incidents, Crew, and Documents.
- Use the star icon to add a vessel to your favorites for quicker access.

Updating vessel information

10. Open the vessel and click Edit in the Overview tab.
11. Update fields such as flag, class, IMO number, or trading area.
12. Click Save. Changes are logged in the audit trail and visible in History.

2.2 Certificates & Compliance

Each vessel tracks statutory and class certificates with expiry dates and reminders.

Status	Meaning
Valid	More than 60 days remaining
Expiring Soon	Between 0 and 60 days remaining — action required
Expired	Past the expiry date — vessel non-compliant
Suspended	Withdrawn by issuer — contact your DPA

Uploading a renewed certificate

13. Open Vessel → Certificates.
14. Click the certificate row → Renew.
15. Upload the PDF, enter the new issue and expiry dates, and pick the issuing body.
16. Save. The compliance score recalculates automatically.

2.3 Audits & Findings

Opening a new audit

17. Go to Audits → New Audit.
18. Select the vessel, audit type (Internal / External / Flag / Class / PSC), and scheduled date.

19. Assign an auditor and, if applicable, a checklist template.
20. Save. The audit appears in Planned status.

Recording findings

- Inside an audit, click Add Finding to log an observation, non-conformity, or major NC.
- Attach photos and reference the specific regulation clause.
- Assign a responsible person and a target closure date.
- Findings automatically feed the vessel's compliance score.

Closing findings

21. Open the finding and click Add Corrective Action.
22. Record the root cause, corrective action, and evidence.
23. Submit for verification. A verifier must approve before status becomes Closed.

2.4 Incidents

Report near-misses, injuries, pollution events, and equipment failures under Incidents.

- Use the severity slider (Low → Critical) to trigger escalation rules.
- Critical incidents notify the DPA and organization admins immediately.
- Attach witness statements and vessel position at the time of the event.

2.5 Crew

- View crew rotation, certificates of competency, and medical validity per vessel.
- Filter by rank, nationality, or expiring documents.
- Export crew lists for port authorities using Export → CSV or PDF.

2.6 Reports

Reports pulls data from every module. Common reports:

- Fleet Compliance Index — headline KPI across all vessels.
- Findings Aging — open findings grouped by age bucket.
- PSC Performance — inspection history by port and MOU.
- CII Ledger — carbon intensity entries by voyage.

Every report can be scheduled to email a PDF to selected recipients on a daily, weekly, or monthly cadence.

2.7 Notifications

- Bell icon in the top bar shows unread items.
- Configure delivery under Profile → Notifications: in-app, email, or both.

- Muting works per module (e.g. mute Crew updates but keep Incidents).

3. Organization Admin Guide

This section is written for the DPA, IT lead, or designated administrator who configures the organization, manages users, and integrates external systems.

3.1 Roles & Permissions

Role	Capabilities
Owner	Full control including billing, delete organization, transfer ownership.
Admin	Manage members, vessels, integrations, and settings. Cannot delete organization.
Manager	Create and edit vessels, audits, and reports for assigned fleet segments.
Auditor	Open audits, record findings, and close them subject to verification.
Crew / Viewer	Read-only access limited to assigned vessels.

Security note

Roles are stored in a dedicated table and enforced by row-level security in the backend. Escalating a user's role always requires an existing Owner or Admin to approve.

3.2 Inviting Members

24. Settings → Members → Invite.
25. Enter the email, choose the role, and optionally scope to specific vessels.
26. Send invitation. The user receives a signed link valid for 7 days.
27. Track pending invitations in Members → Pending. Resend or revoke at any time.

3.3 Managing Vessels

- Import a fleet from CSV using Settings → Data → Import Vessels. A template is provided.
- Archive retired vessels instead of deleting so historical audits remain intact.
- Bulk-assign managers or superintendents from the fleet table.

3.4 Compliance Framework

- Choose which regulatory codes apply to your organization (ISM, ISPS, MLC, MARPOL, IMO 2023 CII, flag-specific rules).
- Each framework contributes to the Fleet Compliance Index with a configurable weight.
- Custom checklists can be authored in Settings → Templates and assigned to audit types.

3.5 Integrations

Eagle Maritime OS supports outbound webhooks and inbound ERP feeds.

- Webhooks — configure endpoints under Settings → Integrations → Webhooks. Secrets are stored encrypted; you can rotate them in place.
- ERP — connect to SAP, Oracle, or NS-Enterprise using the ERP Configurations panel. Field mappings are defined per feed.
- External credentials — API keys for third-party services (e.g. weather, AIS) are managed centrally and never exposed in the app.

3.6 Security & Data Protection

- All data is isolated per organization using row-level security.
- The GraphQL API hides restricted tables from anonymous and authenticated introspection.
- Enforce SSO by disabling password sign-in under Settings → Security once your identity provider is connected.
- Enable two-factor authentication for all admin roles.
- Audit logs are retained for a minimum of 2 years and can be exported on request.

3.7 Billing & Plan

- Settings → Billing shows the active plan, seat count, and invoice history.
- Adding or removing vessels prorates the next invoice.
- Downloading receipts and updating payment methods is available to Owners only.

3.8 Backups & Data Export

- Daily automated backups are retained for 30 days.
- On-demand exports are available for vessels, audits, findings, incidents, and crew (CSV / JSON).
- A full organization export can be requested by the Owner from Settings → Data → Full Export.

4. Troubleshooting

Symptom	What to try
Cannot sign in	Confirm the email is correct, use Forgot Password, and check your organization is not suspended. Contact your admin if the issue persists.
Vessel missing from list	Check filters (status, flag) and confirm your role scopes you to that vessel. Admins can re-assign scope under Members.
Compliance score not updating	Scores recalculate within 60 seconds of a change. If not, open the vessel and click Recalculate in the Compliance tab.
Webhook not firing	Open Settings → Integrations → Webhooks → Deliveries and inspect the last attempt. Rotate the secret if 401 errors persist.
Report export fails	Very large exports (> 50k rows) run as background jobs; check Reports → Jobs for the download link.

5. Glossary

- DPA — Designated Person Ashore, the ISM Code role responsible for safety oversight.
- PSC — Port State Control inspections.
- NC — Non-conformity raised during an audit.
- CII — Carbon Intensity Indicator under IMO 2023 regulations.
- RLS — Row-Level Security, the database mechanism that isolates each organization's data.

6. Support

For help beyond this guide:

- In-app: click the Help icon in the top bar to open the support panel.
- Email: your organization's designated support contact.
- Emergencies: use the Critical Incident workflow — on-call staff are paged automatically.
